```c
#include<stdio.h>
#include<conio.h>
struct student
{
    int id;
    int age;
    int marks;
};
int main()
{
    struct student s;
    printf("enter student age:\n");
    scanf("%d",&s.age);
    printf("enter student id:\n");
    scanf("%d",&s.id);
    printf("enter the student marks:\n");
    scanf("%d",&s.marks);
    printf("checking data validity\n");
    if(s.age>20 && s.marks>0 && s.marks<=100)
    {
        printf("data is valid\n");
        if(s.marks>=65)
        {
            printf("student is eligible for admission\n");
        }
    }
    else
        printf("data is invalid\n");
    printf("student is not eligible for admission\n");
    getch();
    return 0;
}
```
